Specialty Products & Insulation Co.  
Marge Landowski, Account Manager

865 West Avenue ■ Rochester, NY 14611

Fax: 585.328.2641 ■ Email: mlandowski@spi-co.com

Attention All architects, engineers, specifiers, contractors, project managers, estimators, superintendents, foremen, facility managers, building code inspectors.

Earn a certificate of completion from Nelson Firestop Products after attending this FREE and informative seminar March 11, 2010.

This program is registered with the American Institute of Architects (AIA) and NY Department of State Code Enforcement/In-service Training. As such it qualifies for 3 credit hours for architects and building inspectors. All attendees will receive helpful handouts. Reserve your spot today by completing and returning the registration form by March 5, 2010.

## Presenter

*Specialty Products & Insulation Co.*

**Dave Latanision:** For over 20 years, Dave has been involved in many phases of the fire protection industry. He has been a presenter for numerous building code officials, state fire marshal, architectural / engineering and trade association conferences.

He has also conducted educational programs for the Nuclear Regulatory Commission (NRC), American Nuclear Insurers (ANI) and Factory Mutual (FM) groups. His experience involves multi family wood frame, commercial and industrial construction markets as well as a variety of industrial plants, fossil and nuclear power stations.

AIA and NY Dept of State

1:00pm—4:30pm

(AIA and NY Dept of State - Course # 49-5502 - 3 credit hours)

- Introduction to fire protection
- Fire safety objectives
- Typical areas of application
- Historical and recent practice and why they shouldn't be used
- Recognized test agencies
- Code, testing, materials and techniques for penetrations & joint systems
- Fire-stop material and design submittals (per trade group)
- Product installation requirements, tips, tools and equipment
- Fire rated suspended & drywall ceiling fixture protection requirements
- **New** Code requirements for grease ducts
- Return air plenum, conduit systems and fire retardant coatings
- IRC code requirements for fire-stops in wood frame construction

## About SPI

To learn more about SPI's architectural, insulation and fabrication products / services, please visit [www.spi-co.com](http://www.spi-co.com). "Everything you need, Everywhere you are, Anytime you need it -- Experience the SPI difference"

- Nelson Firestop and Specialty Products & Insulation Co. are registered providers for the American Institute of Architects Continuing Education System and NY Department of State Code Enforcement/In-service Training and qualifies for 3 hours of continuing education credits.

## Why Attend the Fire Protection Seminar?

Unprotected openings, poorly sealed penetrations and construction joints provide easy paths for heat, smoke and toxic gases. These potential killers can be stopped with proper selection and installation of firestop systems.

In many instances, the critical life safety firestop systems that are required by code, designed and tested to protect both the occupants and buildings, are overlooked, neglected or improperly installed. **In support of the state wide building code, Nelson Firestop and Specialty Products & Insulation Co. will present an educational fire protection seminar at no charge.**

You can't afford to miss this fire protection seminar. This seminar will provide valuable information to all general, drywall, masonry, electrical, mechanical, plumbing and insulation contractors as well as architects/specifiers, building inspectors, facility owners and maintenance/engineering personnel at hospitals, retirement homes, schools and manufacturing plants. It will discuss the latest materials and methods to firestop penetrations and construction joints as well as fire rated systems for grease and HVAC ductwork. These and other applications are required by IBC, NFPA Life Safety Code 101, NEC, NFPA 96 and IRC.

### SEMINAR LOCATION:

Holiday Inn (Airport)

911 Brooks Avenue ■ Rochester, NY 14611

Seminar: 1:00pm - 4:30pm

**"Arrive no later than 12:45pm to sign-in"**

## Learn How To:

**Save Lives and Property** by installing the right firestop material system correctly. You'll allow occupants more time to evacuate, thus reducing their risk of injury or death, and you'll reduce property damage-claims and costly business interruptions.

**Save Money** by using the most cost effective, up-to-date fire materials and design solutions. You'll reduce material and labor costs. **Save Your Business** by installing the correct life safety systems in compliance with code requirements. You'll reduce the potential liability exposure to your business and employees.

## SPI Membership Affiliations:
